New oligo-nucleotide(s) that bind to basic fibroblast growth factor - modulating, esp. inhibiting, its activity, useful in treating cancer, preventing metastasis, and diagnosis. Claim 3; Page 25; 44pp; English.

The sequences given in AAQB1642-95 are oligonucleotides which modulate the activity of basic fibroblast growth factor (bFGF) by blunding to the bEGF protein. Most esp. the sequences given in AAQB1664-67 represent core sequences of which at least one is present in each of the blunding oligos. These oligonucleotides may form a single strand, double strand, a stem-loop structure, a bubble structure, a pseudoknot or a closed, circular structure. BrGF binds to high affinity receptor and low affinity heparin-like molecules on the filmity receptor and heparin. These oligonucleotides may inhibit or enhance the activity of DBFGF. Particularly, they inhibit or enhance the activity of DBFGF. Particularly, they inhibit or enhance the activity of DBFGF. Particularly, they inhibit or enhance the activity of DBFGF. Particularly, they inhibit or enhance the activity of DBFGF. Particularly, they inhibit or enhance the risk of metastasis. They can be used as diagnostic reagents to determine the presence of thrombin, or used in

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides methods for preparing oligomers having thosphonate internucleosidy1 linkages of a preselected chirality which hybridize to a target RNA sequence. The method of making comprises: (a) synthesizing a nucleoside dimer, trimer, or tetramer with racemic internucleosidy1 phosphonate linkages: (b) purifying the racemic nucleosidy1 phosphonate linkages: (b) purifying the racemic nucleosidy1 phosphonate linkages: (c) purifying the racemic nucleoside to a chirally pure nucleosides to form a synthetic oligomer case to a chirally pure nucleosides to form a synthetic oligomer preselected chirally pure nucleosides to form a synthetic oligomer. The methods are useful for providing chirally enriched synthetic oligomers have enhanced binding affinities for RNA compared to oligomers with racemic all methylphosphonate internucleosidy1 linkages. Sequences AAX31034-75 represent oligomers chemically synthesised using the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel oligonucleoside compound for hybridising to a target incleic acid strand. The oligonucleoside comprises (a) an oligonucleoside sequence that is complementary to a target region or subregion of the target nucleic acid strand and (b) a portion that is non-complementary to a target site in the target region or subregion such that, when the oligonucleoside compound is hybridised to the target strand, a base group at the site is oriented away from an inter-strand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cleavage; oligonucleoside; target; inter-strand orientation; inhibitor; disease; treatment; internucleotidyl bond cleavage; primer; ss.

production of a selected protein in a cell by effecting cleavage at a site in a target region of cellular NRA that codes for the selected protein. They can be used for treating a condition in a mammal that is caused by the production of a selected protein. The oligonucleosides are target-mRNA specific and can be used against mRNA specific to a particular disease state. They are relatively harmless to non-targeted nucleic acid. The non-complementary unit enhances internucleotidyl bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a phosphorothioate oligonucleotide which was prepared by solid phase synthesis. The method comprises adding at least one dimeric phosphoramidite synthen, optionally having a protected thosester group in its internucleotide link, during the synthesis cycle. These novel dimeric phosphoramidite synthons are used as antisense molecules for inhibition of gene expression. The method gives increased yields of the phosphorothiate oligonucleotide (since fewer cycles are needed) and facilitates separation of impurities (greater difference in size compared with use of monomeric synthons).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Solid phase synthesis of phosphoro:thioate oligo:nucleotide(s) using new dimeric synthon(s) - useful as anti:sense molecules for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /*tag= a

The sequence is that of a bovine microsatellite sequence obtd. by screening a library of bovine Mbol DNA fragments of between 250 and 500 bp with an (Ac)15 and a (Tc)15 oligonucleotide probe. One out of 50 clones cross-hybridised. Assuming independent distribution of microsatellites and Mbol sites, the frequency of (Tjn >9 microsatellites in the bovine genome is estimated at >100, 000. The sequence information for a 230 such bovine microsatellites is summarised in the specification and indexed herein (see below).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequences upstream and downstream of the microsatellite sequence were used to generate the required PCR primers for in vitro amplification of the corresp. microsatellite (using the program OPTIPRIM). The microsatellites may be used to identify individuals, for parentage testing, and in the genetic mapping of economic trait loci, or genes involved the determinism of economically important
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polymorphic bovine DNA markers - used in genetic identification,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a phosphorothioate oligonucleotide which was prepared by solid phase synthesis. The method comprises adding at least one dimeric phosphoramidite synthen, optionally having a protected thioester group in its internucieotide iink, during the synthesis cycle. These novel dimeric phosphoramidite synthons are used as antisense molecules for inhibition of gene expression. The method gives increased yields of the phosphorothiate oligonucieotide (since fewer cycles are needed) and facilitates separation of impurities (greater difference in size compared with use of monomeric synthons).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SOlid phase synthesis of phosphoro:thioate oligo:nucleotide(s) using new dimeric synthon(s) - useful as anti:sense molecules for inhibiting gene expression

The method comprises administering an immunostimulatory more acid to a non-rodent subject in sufficient quantity to stimulater an inclination for an on-rodent subject in sufficient quantity to stimulater an nucleic acid the present sequence is one such immunostimulatory nucleic acid. The Immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects and/or orthomyxoviridae), bacterial antigens (e.g. harpesylridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, retroviridae staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or finance deficiency. The present sequence can also be used to redirect a finance response and to activate immune cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

```
screening a genomic library of bovine MboI DNA fragments of between 250 and 500 bp with an (AC)15 and a (TC)15 Oligonucleotide probe. One out of 50 clones cross-hybridised. Assuming independent distribution of microsatellites and MboI sites, the frequency of (Tf) >9 microsatellites in the bovine genome is estimated at >100. The sequence information for ca. 230 such bovine microsatellites is summarised in the specification and indexed herein (see below).
                                                                                                                                                                                                                                                                                       The sequences upstream and downstream of the microsatellite sequence were used to generate the required PCR primers for in vitro amplification of the corresp. microsatellite (using the program opripersity). The microsatellites may be used to identify individuals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                       for parentage testing, and in the genetic mapping of economic trait loci, or genes involved the determinism of economically important traits esp. in cattle, to allow selective breeding. The method comprises:

(a) determining the fraction of each of a set of 13 nearest-neighbour nucleic acid base pair types in a target sequence zone RNA.ASO-DNA hybrid nucleic acid sequence; (b) substituting nearest-neighbour nucleic acid sequence; (b) substituting nearest-neighbour nucleic acid sequence; (b) substituting nearest-neighbour nucleic acid determined fractions into formulas to determine the fractions of each of determined fractions; and (c) multiplying the fractions of the 13 nearest-neighbour nucleic acid base pair types to provide determined fractions; and (c) multiplying the fractions of the 13 nearest-neighbour nucleic acid base pair types by a stability ranking to the nucleic acid antisense sequence; where the results are ordered to produce a ranking. The process is used to rank nucleic acid sequences based on the stability of nucleic acid oligomer binding interactions to
                                                                                                                                                                                                                                         This sequence represents a target mRNP. for the generation of antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                        efficiency comprises determining the fraction a set of nearest-neighbour nucleic acid base pair types in a target sequence substituting nearest-neighbour nucleic acid base pair fractions to determine the fractions and multiplying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Target; antisense; selective rank; inhibition; ranking; stability;

oligonucleotides (ASO) in a method of selectively ranking nucleic acid molecules for inhibitory efficiency. The method comprises:

(a) determining the fraction of each of a set of lanearest-neighbour nucleic acid base pair types in a target sequence zone RRA:ASO-DNA hybrid nucleic acid sequence; (b) substituting nearest-neighbour nucleic acid sequence; (c) nucleic acid base pair types to determine the fractions of each of a series of 13 nearest-neighbour nucleic acid base pair types to provide determined fractions; and (c) multiplying the fractions of the 13 nearest-neighbour nucleic acid base pair types by a stability ranking to the nucleic acid antisense sequence; where the results are ordered to produce a ranking. The process is used to rank nucleic acid sequences based on the stability of nucleic acid oliganer binding interactions to select sequence zones for antisense targeting.
                                                                                                                                                                                                                                                                                This sequence represents a target mRNA for the generation of antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           efficiency comprises determining the fraction a set of nearest-neighbour nucleic acid base pair types in a target sequence sone, substituting nearest-neighbour nucleic acid base pair fractions to determine the fractions and multiplying
efficiency - comprises determining the fraction a set of nearest-neighbour nucleic acid base pair types in a target sequence zone, substituting nearest-neighbour nucleic acid base pair fractions to determine the fractions and multiplying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This oligonucleotide represents an antisense oligonucleotides (ASO)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Target; antisense; selective rank; inhibition; ranking; stability;

This oligonucleotide represents an antisense oligonucleotides (ASO) targeted to a poly-pyrimidine mRNA sequence generated by a method of Selectively ranking nucleic acid molecules for inhibitory efficiency. The method comprises: (a) determining the fraction of each of a set of 13 nearest-neighbour nucleic acid base pair types in a target sequence acone RNA-ASO-DNA hybrid nucleic acid sequence; (b) substituting nearest-neighbour nucleic acid base pair fractions into formulas to determine the fractions of each of a series of 13 nearest-neighbour

nucleic acid base pair types to provide determined fractions; and base pair types by a stability rathing to the nucleic acid sequence; where the results are ordered to produce a ranking. The process is used to rank nucleic acid sequences based on the stability of nucleic acid sequences based on the stability of nucleic acid oligomer binding interactions to select
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for producing a nucleic acid molecule comprising a Hoogsteen-paired RNH:DNA duplex capable of being used as an antisense molecule and capable of recognising an RNH sequence to form a triplex. This involves Watson-Crick pairing. This is useful in transcription to be prevented. The present sequence is an example of a triplex sequence used in the methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Generating nucleic acid molecule comprising Hoogsteen-paired

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for producing a nucleic acid molecule comprising a Hoogsteen-paired RNA:DNA duplex capable of being used as an antisense molecule and capable of recognising an RNA sequence to form a triplex. This involves Watson-Crick pairing. This is useful in antisense therapy, as it controls gene expression by causing transcription to be prevented. The present sequence is an example of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RNAasteriskDNA pyrimidineasteriskpurire duplex for use as an antisense molecule, by heating a triplex to dissociate a Watson-Crick paired pyrimidine strand -

The present invention describes a method for producing a nucleic acid molecule comparising a Hoogsteen-paired RNA:DNA duplex capable of baing used as an antisense molecule and capable of recognising an RNA sequence to form a triplex. This involves Watson-Crick pairing. This is useful in antisense therapy, as it controls gene expression by causing transcription to be prevented. The present sequence is an example of a triplex sequence used in the methods of the invention.
                                                                                                                                                                                                                                                                                                                                    RNAasteriškDNA pyrimidineasteriskpurine duplex for use as an antisense molecule, by heating a triplex to dissociate a Watson-Crick paired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Gaps

Generating nucleic acid molecule comprising Hoogsteen-paired RNAasteriskDNA pyrimidineasteriskpurine duplex for use as an antisense molecule, by heating a triplex to dissociate a Watson-Crick paired pyrimidine strand -

Claim 14; Page 17; 23pp; English.

The present invention describes a method for producing a nucleic acid molecule comprising a Hoogsteen-paired RNA:DNA duplex capable of being used as an antisense molecule and capable of recognising an RNA sequence fo form a triplex. This involves Watson-Crick pairing. This is useful in antisense therapy, as it controls gene expression by causing transcription to be prevented. The present sequence is an example of a triplex sequence used in the methods of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                  (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was bluth end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwns, 2 (qil4732114 |qb) AR129072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chamically-competent E. coll XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil4732114[gb]AFL29072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically competent E. coll XL10-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                        (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymocleotide kinase. Adaptor Oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Contact: Robert B. Vector DNA was prepared from a derivative of pMD42 (gil4732114 gblAF129072.1), a copy-number inducible derivative of plasmid RN. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to
                                                                                                                                                                                  (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 14 DNA polymerase and 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GSS 03-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC, UT

Laboratory mouse two resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 into orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide Kinase. Adaptor oligomicleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel. electrophoresis. Vector DNA was prepared from a derivative of pw042 (g114732114g1AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GSS 05-0CT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC, UT

http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was butten enferted by repeated passage through a polynuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWA42 (gil4732114 [ph]AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plasmid inserts

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared bha was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kp range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil47321141gb)AR129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into calaptor competent E. coll XL10-Gold (Stratagene) cells and selected (ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rm. 308, Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC, UT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                                                                                                                                                                                                             (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a was hydrodynamically sheared by repeated passage through a was hydrodynamically sheared by repeated passage through a polynuclectide at constant velocity. The sheared DNA was but end repaired with T4 DNA polymerase and T4 polynuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwns. (qil47311419b)AR129072.1), a copyrnumber inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chamically-competent E. coll XL10-Gold (Stratagene) cells and solected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                    http://www.jacorgyresources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwns4 (gil4732114|gb]AR129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMMENT
```

```
http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blutur end riepaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWN42 (qi[4/32114]qb]pAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into adaptores and transformed into adaptored wells and selected for ampliallin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   linear GSS 13-DEC-2000

http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pw042 (gil47321141gb1AR129072.1), a copy-number inducable derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and quantified. The sheared, adaptored mouse DNA was annealed to adaptored vector NAA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Contact: Robert B.
